## Curriculum Vitæ

### Work Experience

---

2016

Software Developer  
developing pension business  
system for ChangJiang pension  
insurance (work for Inspur at  
ShangHai)

Inspur as one of the main technical  
supplier for ChangJiang pension  
insurance, we were expected working at  
the customer site and this has been  
continued for several years.

I was responsible for developing the  
channel which was used by the Bank  
Counters and ChangJiang staff for  
processing pension businesses. There is  
only one person besides me, I became  
the major developer after about one  
week acclimation period since July, 2015.

The channel contains Acceptance  
platform, Conversion Platform and Batch  
Platform. When the new function is  
needed, my responsibility is to develop  
these new functions on the three  
platforms. The Acceptance platform  
used to handle acceptance business with upload  
Excel files. After this operation, Batch  
Platform will check the correctness of  
the data from the file and return a  
message containing true or false.

2015

Software Developer  
developing Material Management  
System for oil company (work for  
Pulian at JiNan)

Work for Pulian as a Java developer to  
build a material management system for  
five months. This system through  
building a material supply management  
system of the various business sectors  
into line management to form a closed  
loop management of material. At the  
same time, effective integration of the  
business, the financial data and the use  
of materials for unity. By means of  
information technology and network

technology support, to solve the  
information island and provide standard  
and specification for business operations,  
improve the level of Lu Sheng material  
management.

### Future plans and motivation

---

The next step in my career is learning  
more professional skills and learning project  
management. I have built a personal  
blog website ([www.yujl.org](http://www.yujl.org)) to record  
and share my learning process.
